

Universal Information Director

The Universal Information Director (UID) works with the Dynamic Information Warehouse (DIW) to export business models from the data warehouse to Business Intelligence applications such as SAP BusinessObjects Designer and Microsoft SQL Server Analysis Services.

DIW is an adaptive, business model-driven system for preparing, implementing, and managing data warehouses. UID automates BI configuration when connecting one or multiple BI products to a data warehouse. UID brings the power of the Magnitude business model to drive BI tools throughout the enterprise, and helps to keep reports and analyses up-to-date with underlying changes to the warehouse.

The Universal Information Director consists of the following software components:

- Model configuration logic and User Interface
- Integration Services, through which UID interacts with DIW core services to produce a metadata model
- Metadata bridge, which allows the model export to different Business Intelligence tools

UID 10.0

Client

Platforms

Windows 7 Professional
 Windows 8 Pro
 Windows Server 2012
 Windows Server 2012 R2
 Windows Server 2008 R2

Business Intelligence Software

SAP BusinessObjects XIR3 (SP6 or later)
 Microsoft Analysis Services 9
 IBM Cognos 10.1 or 10.2
