

Kalido® Master Data Management™

Kalido delivers the only business-centric master data management and reference data management solution that supports stewardship and governance across the enterprise. With Kalido MDM, business users and decision makers can begin to trust their data and finally unlock the real value of the “true intelligence” within their systems.

MDM, RDM and Data Governance

How will you efficiently engage with data subject matter experts, manage and govern how data is maintained and used throughout your organization? Because master data and reference data drive operational and analytical business processes, any invalid master and reference data can have a negative impact on your business. With Kalido MDM, organizations can improve business decision making through better data consistency, accuracy and quality while reducing risk and cost.

Kalido MDM offers the core capabilities to model, master and govern master data and reference data, leading to better data that feeds business processes to lead to better business outcomes.

Model it for Every Domain

Rich modeling — Kalido MDM is business model driven. The business model constructs support the real-world business environment, enabling your MDM repository to reflect the way the data is used in consuming systems.

Visual Model Development — Integrated visual business modeler creates or imports models covering common and obscure domains without costly customizations, enabling you to meet your MDM needs in a single technology.

Domain-agnostic — Kalido supports every domain in the model as well as in matching and mapping master data, which reduces manual stewardship requirements.

Master it with Everyone

Dedicated Interfaces — Kalido MDM includes audience-specific interfaces that meet the needs of data stewards, business application users and information consumers. These interfaces allow for active, role-based stewardship for everyone involved in managing, creating and using master and reference data.

Workflow and API — Kalido MDM includes an embedded workflow capability and a business-model-driven API which enables real-time collaboration for the process of managing master and reference data.

Proactive Governance — Kalido MDM offers stewardship-driven data governance for a top-down approach to governing master data. This capability enables proactive participation and involvement in master data governance by everyone.

Govern it Everywhere

Universal Access — Kalido capabilities are available on mobile devices, in browsers and via MDM applets embedded in operational and analytical business applications, making it easy for everyone everywhere to participate in the master data governance process.

Change Management — The Kalido MDM model is easily changed and incrementally expanded to rapidly accommodate evolving as well as new master data lifecycle requirements.

Audit Trail — All audit, validation and security requirements are managed seamlessly. Kalido MDM also includes robust history tracking for a bullet-proof audit trail to meet regulatory and statutory requirements.

About Kalido

Kalido is a product brand of Magnitude Software, a leading provider of Enterprise Information Management software that drives real business value for customers. Magnitude Software offers a family of award-winning products, from business intelligence and data warehousing to master data management, reporting and analytics.
